

John Sjobring – Cord Management

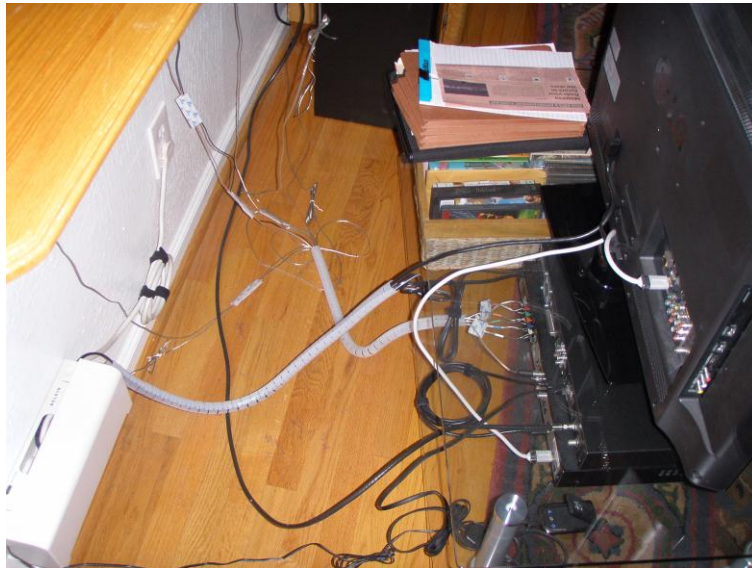

These are photos of the management of the cords behind my TV / DVR / Speaker System. I don't have a classroom situation.

No "Before" photos. You will have to trust me that it didn't always look like this. The "Before" situation looked like a rat's nest with huge dust bunnies.

This is the power strip. Mounted above the floor molding, All power cords from components bound in a plastic loom. Excess length of power cord to wall plug is bound with Velcro strips.

Lid opens to reveal plugs; otherwise remains closed. Plugs are labeled to identify which component they go to.

This view shows power cord loom going from components to power strip, and the other plastic loom with all the speaker wires.

This view shows the backs of all the components, with excess cord lengths bound by Velcro ties.
